PERSONAL PROJECTS

E-Learning App > Learnify

- I've developed APIs for an e-learning app, helping students access courses and learn new skills. My work focuses on building strong and scalable backend systems that integrate smoothly with the app's frontend.

Admin-Task-management/REST APIs/Pocket Dictionary/language-translation-apps

- **Pocket Dictionary:** Built a lightweight web app that provides word definitions and synonyms using a public API for fast lookups. **Admin Task Management:** Created a task management system with CRUD operations and task tracking using Node.js, Express, and MongoDB. **REST APIs:** Designed RESTful APIs with authentication and data validation for efficient data management using Node.js and MongoDB.

Ai Prompt > NGS GENRATIVE AI

- Developed a MERN stack application integrating Google Generative AI for real-time conversational responses based on user input queries.

Social Media Platform> LinkUp

- I work as a backend developer for a social media app, where I design and implement APIs that let users connect, share content, and interact smoothly. Improving user engagement and actively contribute to growing the app's community by enhancing its backend functionality.

LifeCare > Health Center Web

- Developed a comprehensive healthcare platform to enhance patient engagement and streamline access to medical services. Designed and implemented a user-friendly interface to improve navigation and user experience. Utilized modern web technologies to ensure responsive design and cross-platform compatibility. Collaborated with healthcare professionals to gather requirements.
